Research Interests

My research examines *when help is unhelpful in the workplace*, particularly when well-intentioned efforts to assess and improve others’ performance backfire. I use behavioral laboratory experiments, field studies, and formal computational models to study several interconnected research questions in this space, including why people often take over tasks when they should not, why top performers do not always give better advice, and why performance evaluations can become less accurate as performance improves.

Teaching Interests

Negotiation, Organizational Behavior, Managerial Decision-Making and Leadership, Business Ethics, Communication, Teamwork, Research Methods, Data Science, Statistical Analysis, Computational Modeling
